## DIY GREENHOUSE PLANS

Our DIY plans sets are wood framed, standardized designs that are intended to apply to any project location. They are designed with the DIYer in mind. They can be taken directly to a municipal building office for permitting, or shared with a contractor for labor bidding.

SIZES: 10'x12', 12'x16', 12'x20', 12'x24'

Purchase of a DIY set includes engineered construction drawings (40 psf, 160 mph ultimate gust, and IBC seismic zone B), materials lists and installation guidelines.

## BACKYARD GREENHOUSE KITS

Our BackYard kits are designed to take the efficiency and performance of our commercial steel greenhouses and apply it at a smaller scale. These kits consists of a 2"x4" galvanized steel frame, thermally broken insulated metal panel wall system, 16 mm, triple wall polycarbonate roof and south wall, ventilation system, and doors. The kit also includes a recommended foundation design.

BackYard Kits are available in 18' depth and lengths of 6' increments starting at 18'x24'. Prices range from US\$58 - US\$80/sqft

## HIGHYIELD™ KITS

While BackYard Kits are our most popular residential greenhouse product, some clients prefer our more spacious HighYield™ Kits.

HYK's are 23' and 30' deep and are scalable in increments of 4'.

## Interested in Growing with Aquaponics?

Grow fish and vegetables together, at home. We work with The Aquaponic Source™ to ensure the most appropriate aquaponic system is integrated into any style or size Ceres residential greenhouse.
